

邀请信

Dear Professor George Smith,

I am pleased to invite you to attend the Ninth International Conference on Finite or Infinite Dimensional Complex Analysis' to be held from July 24 to 28, 2007 in Jinan and Tai'an city, China. The conference is organized by Shandong University and Shandong University of Science and Technology. (单个时间用 in upcoming July 8, 2006)

I am writing to ask whether you are willing to present a talk in English at the conference. Invited talks will be one hour long, followed by a 20-minute question and answer session.

The theme of the 19th ICCE is "Chemistry and Chemical Education for Humanity", in keeping up with our fast-changing world and continually expanding scope of the chemistry and chemical field. Chemistry is not only an essential tool and language as well as basic knowledge for the most of science and technology of our everyday life. but also an essential science for future generations to ensure their quality of life.

The purpose of this program is to have Chinese and American faculty explore common issues during a three-week program to improve teaching about the US and China. After several days of orientation at Peking University for both groups of faculty, Chinese participants will visit the United States, especially, Washington, D.C. and Youngstown, Ohio, while the Americans travel to Xi'an and Shanghai, China. At the conclusion, participants will meet in Honolulu for a final program and presentations.

During your travel in the United States, you will be provided with local expenses, including hotel accommodation and meals.

If you have any questions, or need any assistance, please do not hesitate to contact SB, Program officer at 808-44-338 or email hidanoc@eastwestcenter.org. We look forward to welcoming you in Hawaii.

Sincerely yours,

(signature)

Terance W. Bigalke .

Director and Dean of Education

Letter of Acceptance

(letterhead)

May 11, 2006

Dear Professor John Smith,

I have received your letter dated June 22, inviting me to speak at the Opening Ceremony of the Fifth National Council Meeting of Translators Association of China to be held on November 4-6, 2005, in Beijing. I will speak on "Globalization and Diversity: What Do They Mean for Translators?". //I am pleased to accept the invitation and will send my paper entitled "Climate and Urban Environment Problems" to the Paper Committee before the required date. Thank you for your kind invitation and I look forward to meeting you in Seoul. I wish the meeting a very fruitful and successful one.

Sincerely yours,

(signature)

July 5, 2005

Dear Professor Chuck Taylor,

Thank you for your letter of 19 June, 2005, inviting me to attend the International Conference on Education to be held at the National University of Singapore, Singapore, 6-9 December, 2005, as a part of the NUS Centennial Celebration Conferences.

I am very sorry to inform you that I shall not be able to honor the invitation because I have been suffering from ill health for some time. I am firmly advised that it would be unwise to undertake any distance travel by air in the near future.

I wish the conference a successful one.

Respectfully yours,

(signature)

Feilong Wang

**Chairing the Plenary session or the 35th congress on Peaceful Use of Atomic Energy,
May 9-11, 2002**

Opening speech:

Your Excellencies, Beloved Ladies, Gentlemen and Friends,

Good morning! Please **allow me now to call the meeting to order**. First **welcome you** all on behalf of the Executive Committee of the Congress on the Peaceful Use of Atomic Energy. **Let me introduce myself**. I am Yang Qing from China, serving as chairman for this morning 's session. **We are very much honored to have** Dr. Elton Doyle, professor of physics from Indiana University, sitting on my left, **as co-chairman** with me. Miss Nellie Pierce acts as secretary of the meeting.

The purpose of this meeting is to exchange experience and knowledge in regard to the theories, new developments and practical applications of two promising, techniques of civil engineering. A number of scholars and experts will read academic papers, each of which will take about 30 minutes. It is our hope that there will be half an hour at the end of each meeting left for group discussion. **The first speaker today is** Dr. Soddy, professor of chemistry at the New York University. A native of New Jersey Professor Soddy holds the B.S. and M.S. degrees from Michigan University and the Ph.D.degree from Columbia University. **His major field of interest and professional career has always been** chemical industry or been linked with it. He is an outstanding member of many international professional societies throughout the world. **It is really great pleasure for us to have him address us. His lecture is entitled** "Chemistry for Peace". **Now I would like to invite him to deliver his lecture. Let's welcome him with warm applause.** Professor Soddy, please!

Compliments:

Thank you, Prof. Saag. Your presentation is very convincing. From your presentation, we know that you back up the Dutch theory, that is, antiviral drugs are not preventing HIV from killing cells, but simply releasing into the blood mature CD4 cells that have been trapped elsewhere. If the Dutch team is right, the consequences could be profound, and scientists will find new ways of treatment for people with HIV infection in the new century. **Your speech is indeed very useful, interesting and challengeable. Thank you.**

OK, let me introduce the next speaker Frof. Aian Simpson.

闭幕词

Mr. Chairman,
Excellencies,
Distinguished Delegates and Guests,
Ladies and Gentlemen,

The Third Telecommunications Development Conference **is about to end. During this conference, thanks to our host government and the people** of Turkey, I felt a very good working spirit among all the delegates with a view to converging' toward the solution of urgent telecommunications development problems and in particular, to reducing the infrastructure gaps.

Let me congratulate you for the achievements of this conference. This was the result of very hard work by delegates under the very competent leadership of the Chairman, Mr. Fathi Yurdal. I associate with this success all the other members of the Steering Committee as well as Chairmen and Vice-Chairmen of Committees and Working Groups and thank them for their efficient work.

Two hundred and thirty participants is a strong signal of belonging, support and involvement on which future activities can be built. Local and regional authorities are backbones of society and this has been very clear also during this conference.

We have worked actively in the workshops these days, and our work has provided value not only to the resolution but also to the work of the Association of Thermodynamics in general. Therefore, I can thoroughly say that the resolution and contributions from the workshops presented these days reflect the position of Association of Thermodynamics based on the opinions of its member regions and will form the basis for the future work of our Association.

I shall end here by thanking you for coming to the 7th International Conference of Thermodynamics. I hope that you have benefited much from the conference and from discussions with colleagues.

Once again I thank my friend Bill for inviting us to this beautiful city.

Thank the New York University for hosting the conference.

Thanks go to everybody who has contributed to the conference with reports and introductions.

And lastly, my friends, see you next year in Beijing, China for our next conference. I wish everybody a pleasant and safe journey home.

Thank you all!

Application Letter for a Working Group

(Letterhead)

January 22, 2002

Dr. Melba Ripley
The School of Architecture
University of Louisiana
100 Webber Hall
Baton Rouge, LA 70814

Dear Dr. Ripley,

I am a researcher at School of Materials Engineering, Purdue University. I have devoted nearly five years to the study of how inexpensive housing can be made of native materials in Third World countries; I was intrigued by the recent accomplishments of you and your students in designing and providing “instant” housing to victims of the recent hurricane in Central America. Therefore, I wish to learn about construction techniques of developing new structures in your working group for six months, preferably during April through September.

During the past three years, I have been an assistant to Dr. Graham Benson who has shared the rostrum? with you at many academic and global conferences on housing. Together we, along with a group of students, have spent the past two summers showing people in South Central Africa how to mix a specially prepared binder' developed by our research lab with local materials to make durable homes in a matter of days. I would truly like to have the opportunity to do research work in your group so as to learn state--of-the-art technology in housing-building materials.

I would greatly appreciate it if you could send me more information about application at your earliest convenience.

Sincerely yours,

Thomas Lamb
